POND

A NEW ALMANACK for the year of our LORD GOD 1676.

Being the Bissextile or Leap-year, and from the Worlds Creation at the Spring 5679 Years Complear.

Amplified with many good things both for pleasure and profit: and fitted for the Meridian of *Saffron Walden* in *Essex*, where the Pole is elevated 52 degrees and 6 minutes above the Horizon.

And may serve indifferently for any other place of this Kingdom.

CAMBRIDGE,
Printed by *John Hayes*, Printer to the University, 1676.

The Common Notes and Moveable Feasts for this year, 1676.

The Golden Number is	5
The Cycle of the Sun	5
The Epact	25
The Dominical Letters	B. A.
Shrove-sunday	Feb. 6
Easter-day	March 26
Ascension-day	May 4
Whitsunday	May 14
Trinity-sunday	May 21
Advent-sunday	Decemb. 3

The Suns entrance into the four Cardinal Signs.

THe Sun enters Aries March 9 day, 37 minutes past 3 in the afternoon, at which time the figure of the Heavens will appear in this manner, viz. 8 Degrees of Virgo, Ascending in the East, 17 Degrees of Taurus upon the midheaven, 5 Degrees of Pisces in the West, and 27 of Scorpio upon the Cusp of the fourth house. Mercury who is Lord of the Ascendant, is with the Sun in the 8 House, called the house of death, and the Dragons Tail in the 10 House, called the House of honour, which foreshews the degrading, or diminishing the power, (if not the death) of some eminent person in the world, as also the death of young people.

He enters Cancer June 10 day at 7 at night.
He enters Libra Septemb. 12 at 10 before noon.
He enters Capricorn Decemb. 10 at 10 at night.

The

The beginning and ending of the Terms

Hilary Term begins January 24, ends February 12,
Easter Term begins April 12, ends May 8.
Trinity Term begins May 26, ends June 14.
Michaelmas Term begins October 23, ends Novem. 28.

Note that the Exchequer openeth 8 days before any Term begins, except the Term of Trinity, in which it openeth but 4 days before.

Times prohibiting MARRIAGE.

MArriage comes in on the 13 day of January, and at Septuagesima Sunday it is out again untill Low-sunday; at which time it comes in again, and goes not out till Rogation-sunday: thence it is forbidden untill Trinity-sund. from whence it is unforbidden till Advent-sunday; but then it goes out, and comes not in again till the 13 day of January next following.

The measure of *England*, and the adjacent Islands.

The greatest length of England North and South, is from Barwick to the lands end, which is 386 miles. The shortest length from Barwick to Calshot in the County of Southampton is 286 miles, the broadest place from the land end to Sandwich is 279 miles, or from S. Davids in the West of Penbrook, to Yarmouth in Norfolk 240 miles. Ireland is in compass 948 miles, the length north and south is 303 miles, the breadth East and West is 113 miles. The Isle of Man is in compass 91 miles. The Isle of Anglesea is in Compass 85 miles. The Isle of Wight is in compass 57 miles.

January hath xxxi days.

New moon the 5 day, 39 min. past 4 morning.
First quarter the 12 day, 58 mins past 8 at night.
Full moon the 20 day, 2 min. past 7 at night.
Last quarter 27 day, 18 min. past 6 at night.

Lupus, or the Wolf, containeth 19 ſtars, the Poetical reaſon is this. Chiron the Centaure being a juſt man, was greatly given to the worſhip of the Gods: for which thing that it might be noted to all poſterity, they placed him by this Beaſt, which he ſeemeth to prick or thruſt through with his ſpear, as it were ready to kill for ſacrifice.

Ara, or the Altar, containeth seven Stars; some of the Poets say it is the Altar on which the Centaure was wont to offer his sacrifice, but others tell the tale thus, When the Giants (called the Tyrants,) laboured to pull Jupiter out of Heaven; the Gods thought it time to lay their heads together, to advise what was best to be done: their conclusion was that they should with one content keep out such fellows: & that the League might be

On the 3 day we find Erasmus placed, who was with others (by Maximianus, partner to Diocletian, as well in his cruelties as power) put to death for professing the faith of Christ, having been strangely tortured before; this was *Anno Christi* 296, this Erasmus was a Bishop in Campania.

July hath xxxi days.

First quarter the 3 day 14 min. past 10 before noon.
Full moon the 25 day 24 min. past 3 morning.
Last quarter the 23 day. 34 min. past noon.
New moon the 30 day. 38 min. past noon.

On the 25 day of this moneth S. James the Apostle suffered Martyrdom by being beheaded, *Anno Christi*. 43 his courage was so great, and cause so good, that going to his execution, he behaved himself so undauntedly, that by his resolution and carriage he converted the informer, that was the instrument of his end; so that he asked him forgiveness, and became a co-partner in his sufferings.

Piſcis Auſtrinus, or the ſouth Fiſh, containeth 11 ſtars. The reaſon why this fiſh was placed in Heaven is uncertain: yet ſome affirm, that the daughter of Venus going into the water to waſh her ſelf, was ſuddenly transformed into a fiſh; and that fiſh afterwards tranſlated into Heaven. Thus have I given a brief account of moſt of the Conſtellations viſible above our Horizon.

The 27 day is placed S John: he wrote his Goſpel at Epheſus *Anno Chriſti*, 89, and in the year 90, was ſent to Rome to ſuffer; where being miraculouſly preſerved in a Cauldron of ſcalding Oyl; he was by Domitian baniſhed into Patmos where (it is thought) he wrote his Revelations; and afterwards died at Epheſus of an Apoplexy being 100 years old.

The Regal Table in an exact manner.

The Year, Moneth, and Day, (accounting the Year to begin Jan. 1.) whereon every K. and Q. of Eng. since the Conq. began their Reign.			The number of Years, Moneths, & Days that every K. & Q. reign.				The num. of y. expired in this ve since they began to reign: as also since they ended.	
K. W. Conq.	1066	Octob. 14	20 y	11 m	22 d	1610

The use of this Table in Example.

King *Henry* 8 began his reign in the year of *Christ* 1509, *April* 22. He reigned 37 years 10 moneths and 2 days. It is since he began his reign 167 years compleat the 22 of *April* in this year 1676. Now to know the time since the end of his Reign, before his name standing on the right hand, you shall there find 130 years since he died, *January* 28. And so of the rest.

The foregoing Tables explained.

THe former Tables perfectly shew the Break of Day, Sun-rising, length of the day, length of the night, setting of the Sun, with continuance of twilight, for the whole year, for the latitude of 52 Degrees, 40 minutes, the use is thus,

In the first, or last Columns, find the moneth, and in the next to them the day, in the which you would know any thing contained in the Tables, if you cannot find the day take the nearest unto it, and right against the same you have the hour and minute of all, under their proper Titles; onely take notice, that the first part of the Table serves for the summer half year, namely from the 10 of *March* to the 13 of *September*, and the last part from the 13 of *September* to the 10 of *March*: but to make it plain I shall add one example.

The 6 of *April* I desire to know the time of the day-breaking, sun-rising, and the rest. I find *April* in the first Column, and in the second the 6 day, and right against the same, under the Column of day-breaking, 2, 42, which sheweth the day breaketh at 2 of the Clock and 42 minutes, in the next 5, 4, which sheweth the sun riseth 4 minutes past 5, in the third is 13 hours 52 minutes the length of the day, in the fourth 10 hours 8 minutes the length of the night, in the next 6 hours, 56 minutes the time of sun-setting, and lastly 9 hours 18 minutes the time when twilight ends, and thus you may proceed at any other time, onely take notice that if you be removed far from the Latitude for which these Tables were Calculated, either north or south, you will find some errour in them.

Of the Eclipses this year.

THere will be but two Eclipses this year, and both those will be of the Nobler Luminary the Sun.

The first will happen the first day of June, the middle whereof (or greatest obscuration) will be with us at Walden about 20 minutes past nine in the morning, the Digits Eclipsed will be four and fifty minutes; it falls in the twenty one Degrees of Gemini, the Ascendant of *London*.

The other Eclipse will be the twenty fifth day of November in the morning, the beginning of it will be before the Sun riseth and therefore cannot be seen by us, but if it be clear we may see the Sun rise Eclipsed, and also the end of it.

Some short Rules for Husbandmen and Gardiners.

SEt and transplant young Trees and Quickſets every New moon, from Novem. till Feb. in the ſame Months alſo Prune and nail up wall fruit, and dig and dung your ground againſt the Spring; ſow, ſet, and eat ſuch things as you would have to grow, or bear fruit quickly, in the New Mo. if it may conveniently be done, on the contrary ſuch things as you would have to grow ſlowly or not at all, eat or pluck them up in the wane of the Moon, at which time alſo Fell Timber, ſow round ſeeds, and ſuch ſeeds as produce round roots about the Full Moon, ſow hardy ſeeds and pot herbs in Feb. if the weather be mild, but tender ſeeds not till after the cold winds and froſts are over, gather ſuch fruit and ſeed as you intend to keep about the Full Moon, in a fair day. Graft at the latter end of Feb. or in March in mild weather.

A Table whereby you may find the Golden Number, Epact, Cycle of the Sun, and Dominicall Letter, for 28 years to come, and from thence Easter day.

THe former Table is so easie, it needs no explanation, for find but the year of our Lord in the first Column, and right against the same, (under the respective Titles) you may find whatsoever is contained in the Table, wherefore I shall onely give an account from whence those numbers do arise.

The Golden Number is nothing but a periodicall Revolution of 19 years; in which time the ancient Astronomers were of opinion that all the Conjunctions and Aspects, of the Sun and Moon did return to the same place in the Zodiack which they were at 19 years before, but this is not exactly true, this Circle is called *Decemnovenalis Circulus*, also called the Golden Number from its excellent use, and because it was written in the Kalender with letters of Gold.

The Epact (never exceeding 30) ariseth from the excess of the Common Solar-year, above the Common Lunar-year, the one containing 365 days, and the other but 354; from which difference (being 11 days) cometh the Epact, which is added to the Lunar-year to make them equal.

The Cycle of the Sun is a Revolutional number of 28 years, in which space of time there is a perfect change of all the Sunday-Letters; so as this Circle was invented not to shew any changes in the Suns motion, but to find thereby the Sunday-Letter for any year proposed.

The Sunday Letter is always one of these seven, A B C D E F G, it sheweth Sunday, or the day of the Sun all the year, but herein observe that in the Bissextile or Leap-years there are two Sunday-Letters, whereof the

first is to be accounted the Sunday-Letter, from the first of *January*, to the 24 of *February*, or Eve of Saint *Matthias*, and the other from thence to the end of the year.

The Feast of Easter, according to the command of God, was celebrated by the children of *Israel*, upon the 14 day of the first moneth *Nisan*, in the Evening, the beginning of which Moneth was from the New Moon next following the Vernal Equinox; but it is not kept by the Christian Church in the 14 Moon, but on the Lords day following the same, and the Bounds or Limits of Easter, (as it is observed by the English Church) are from *March* 22, to *April* 25 inclusive; so that it never falls sooner then the 22 of *March*, nor later then the 25 of *April*; the reasons are first, Easter can never be celebrated on the 21 of *March*, because that is the supposed day of the Equinox, so that the Full Moon in the moneth *Nisan* cannot fall before that time; therefore the next Lords day cannot be sooner then *March* 22.

As for the later Bound, *viz.* *April* 25, it is to be noted, that the Full Moon in *Nisan* cannot happen later, then when the 14 Moon of the Moneth *Adar* falleth on the 20 of *March*, to which if an intire moneth of 29 days be added, the last Full Moon in *Nisan* will fall *April* 18; and because that day may be Sunday, a whole week more is to be added, which may extend to *April* 25. inclusive.

A plain and easie Table shewing the true Interest due upon any sum of money from five shillings to an hundred pounds for a year or under, after the rate of six pounds in the hundred.
